

April 12, 2013

Dear Nuclear Medicine Professional,

Today we learned from NRG, operator of the High Flux Reactor (HFR), that they continue to make progress in completing the necessary repairs to the reactor. However, they anticipate the HFR will not return to service before the middle of May.

We have assessed the molybdenum-99 options available to us from our comprehensive supply network, and currently expect we will meet customer needs for technetium-99m (Tc-99m) generators in May provided current projections of reactor availability hold true. Previous estimates for April are unchanged; a view of May is shown below. These estimates are, as always, subject to change.

MAY 2013 - WEEKLY						
S	M	T	W	T	F	S
			1	2	3	4
5	6	7	8	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25
26	27	28	29	30	31	

	Generator standing orders met
	Majority of generator standing orders met but no extra
	Generator standing order shortage resulting in size reductions
	Significant shortage to generator standing orders
X	No Mo-99 supply expected; generator production cancelled

As we have throughout the extended HFR shutdown period, we will continue to do everything possible to ensure your needs and those of the patients you serve are met. Further updates will be provided should they become necessary.

If you have further questions, please contact your Mallinckrodt sales representative or our Customer Service department at 888-744-1414. Thank you for your continued support.

Sincerely,

Dan Brague  
 Vice President, Sales and Marketing, Nuclear Medicine
